

AWS Application Migration and Modernisation

AWS Application Migration from Anaeko

Achieve quick and cost-effective application and data migrations with Anaeko. Our approach focuses on business goals and delivers the true benefits of AWS cloud. We deliver a complete solution from business case analysis to roll-out, training and support. For each application workload identified we build a business case that considers total cost of ownership TCO and benefits versus risks. Our AWS-certified experts use trusted migration frameworks, automated deployment, and tools to deliver migration and modernisation that leverages the full potential of AWS cloud services.

Anaeko's migration service delivers

Outcomes-based success

Focus on business goals, transparent TCO, and optimal use of cloud capabilities for business benefit.

Increased Security

Automated deployment of secure landing zone, and use of data access controls, encryption, and backup.

Low Risk

Quick-win pilot delivery to build stakeholder confidence, followed by rapid phased delivery.

Choose Anaeko as your AWS Migration Expert

We engage with your stakeholders on application and data workload discovery, and plan for migration and modernisation based on agreed success criteria and priorities. Our multi-discipline engineering team will deliver using established frameworks and tools and ensure alignment to the **AWS Well-Architected Framework** and industry best practice. As part of our **migration and modernisation service** we will:

1

Plan: discovery with TCO analysis per workload and high-level plan.

2

Prove: establish a secure landing zone and migrate the first workload.

3

Implement: rapid phased rollout of existing workloads.

4

Support: operations training and ongoing support, with option of managed services.

AWS Application Migration and Modernisation services from Anaeko enable organisations to achieve their business objectives and goals in AWS Cloud.

With an AWS Migration and Modernisation Service from Anaeko you will:

Focus on
Business
Outcomes

Safely Migrate
Applications
and Data

Increase Security
Posture and
Compliance

Optimise Cost
of Service
Delivery

Modernise
Workload
Platforms

As part of Application Migration and Modernisation Service Anaeko provides:

Discovery: Our stakeholder engagement and TCO analysis for identified application and data workloads delivers a migration strategy and plan with focus on successful business outcomes.

Rapid Migration: Our methodology is to start small, with an initial pilot to prove value and build stakeholder confidence that generates momentum for a phased rollout of broader application and data workloads.

Enhanced Data Security: Central to our migration approach is to leverage AWS capabilities to enhance data protection, such as access control policies, encryption in transit and at rest, automated backup, and disaster recovery.

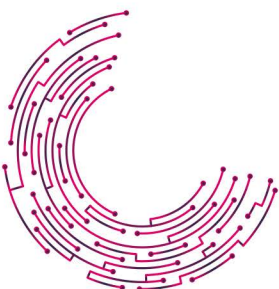

Secure Landing Zone: Automated deployment of a secure cloud landing zone for your applications and data, aligned to the **AWS Well-Architected Framework** and industry security guidelines.

Modernisation: We go beyond a lift & shift (ReHost) approach to address all aspects of AWS Well-Architected principles made possible by running in AWS cloud, such as right-sizing compute and storage capacity for cost optimisation. Anaeko can deliver RePlatform and ReArchitect options.

Managed Services: Anaeko can optionally provide full hosting services with our DevOps team supporting your applications under a managed services agreement.
