

Data Discovery

Make data driven decisions

Take control of your data and lay the foundations of good data governance with Anaeko's **Data Discovery** Service. Understand your existing data, discover the possibilities, identify the gaps and define your road map for a shared view of data across your organisation. Empower Data Analysts and accelerate unified reporting by creating a definitive catalogue of your organisation's data to track ownership, measure quality, map data-lineage and promote shared use and reuse.

With a data discovery from Anaeko you will:

Build a foundation for Data Governance to protect your customers and your reputation.

Plan and accelerate new initiatives with confidence by increasing visibility and trust in your data.

Discover insights from your data, design solutions based on available data and identify areas for business operations improvement.

Scope and design improved processes and plan for automation to free up key staff by identifying manual processes and ad-hoc data sources.

Choose Anaeko as your data partner & discover your data:

Anaeko has a wealth of experience at designing and delivering data platforms from high performance custom integrations and big data storage solutions through to analytics, reporting and data visualisation. At Anaeko we recognise that every data project, from a simple supplier integration to cloud migration and cutting-edge ML data science, is built on a deep and detailed understanding of the data that is available and the data that is needed to succeed.

- Benchmark your data with a detailed data quality report defining accuracy, timeliness and completeness with recommendations for remediation and next steps.
- Identify sensitive data using the latest ML tools from AWS to classify data, identify data leakage risks and review processes for handling sensitive data.
- Identify and document data sources and owners, consumers and access controls to baseline your organisation's data landscape. Prioritise, scope and plan based on knowledge and not assumptions.

As part of our data discovery assessment Anaeko provides:

Data Quality: A full data quality assessment to quantify the accuracy, completeness and timeliness of source data. Define targets for error rates and acceptable levels of missing data to drive improvement and improve trust in the data.

Risk Assessment: Review and document access control, encryption and retention policies. Identify data governance risks for data privacy, residency, backup, retention and access. Ensure your data is compliant with your policies and obligations.

Data Ownership: Identify and interview data owners and experts to fully document the context and history of source data, the processes that maintain the data and it uses within the organisation. Capture the knowledge to use your data with confidence.

Data Integrity: A backup and recovery assessment and recommendations in-line with the AWS Well Architected Framework. A detailed report on referential integrity and cross-system integrity and the identification of the master records.

Improved Accessibility: Review data security classifications and data masking strategies and recommend an approach to safe data sharing. Promote innovation by creating a complete picture of your data landscape from source to use. Anaeko will help you safely streamline authorisation and access.
